Iridium was originally found as a contaminant (with the element osmium) in platinum, it was from the solid remnant left when platinum was dissolved in aqua regia. And hydrochloric acid is that Tennon made his discovery with both elements. Element information: properties and uses | Periodic Table of Elements

Astatine was discovered in 1940 by bombarding a bismuth target with alpha particles. The most stable isotope of astatine, Astatine-210, has a half-life time of only 8.1 hours. News and research, University of York: new command event

New osmium
