A points system is a common occurrence in betting where YOU decide how much a point is. Tipsters will often tell you how many points they think you should bet such as a 2 point win. The beauty of this is that you decide what value each point has when you begin. A lot of people start with a 100 point base so if you had started with, as an example, £100, you would simply divide this by 100 to get the value of your point £1.00.

How much would my bets cost?

A brief explanation is laid out in the table below. The purpose

is to show how much, in total, your outlay would be if you were using 10 stakes, for example, on a bet.

Stake 5 points 10 points 20 points 0.5 points 2

5.00 10.00 0.5 points each way 5.00 10.00

20.00 1 point 5.00 10.00 20.00 1 point each way 1

20.00 40.00 2 points 10.00 20.00 40.00 2 points each way 20.00 40.00 80.00

It is imperative that you decide how many points you will use

before you start betting if you decide to use a points system. By changing your

point value half way through the month will hugely distort your profit/loss as you could win, say, 10 bets whilst using 0.50 points. If you

then lose 10 bets with 2.50 points you will ultimately not be in

profit for that month.

We would recommend that once your betting bank increases by 5

0% of the starting points, you increase your point value by 50%.

Example

Once your 100 point bank becomes 150 points, you increase your

point value by 50%, so 5 becomes 7.50, 10 becomes 15

and so on.

Depending on the tipster that you follow (if any) examples of bets that

you may see are outlined below:

KAUTO STAR GOLD CUP 6/1 1 POINT WIN

If you were using £10 per point you would place £10 win.

£20 per point £20 win
